

Demo guide

How to see it working in two minutes

Amethyst & Azure

Kasi Grid: Know before it goes dark.

FNB App of the Year Hackathon 2026 · Track: Climate resilience and essential services

Tshedza Tshikovhi and Mulanga Munaka

Source code: https://github.com/Unsolvedstar/Kasi-Grid

Live app: https://kasi-grid.vercel.app

Demo video: https://drive.google.com/file/d/1vZBvpxMXeu8RfhizZllfzZQadJr1p1d-/view?usp=drive_link

1. Try it

- Satellite street: drag the slider to see the next 48 hours; tap the map to explore it full screen.
- Today: the verified outage, the outage map and the forecast.
- Deliver: enter 300 W and 1000 Wh, tap "Switched to battery now", and watch the countdown and alerts.
- Share: see what neighbours offer or ask for (charging, water, lifts), and post your own in three steps (a free account is needed to post, so neighbours see your name).
- Sign in with the demo login (judge1@kasigrid.demo / KasiGrid2026!), or create your own free account when asked (a name, a cell number or email, and a password), then file a report in three steps with an optional exact pin. Your name shows on it.
- Accessibility button (top right): try the deaf and blind quick setups, text size and high contrast.
- Settings: find any place in South Africa and join its community.

DEMO LOGIN for judges: judge1@kasigrid.demo with password KasiGrid2026! (a second account, judge2@kasigrid.demo with the same password, lets you confirm a report made by the first). Choose Sign in, type these, and you are in; the app then opens signed in every time. Open the live app or the repository link. The demo build opens with a verified outage, a forecast and a typical duration. Items marked Sample (carers, equipment prices, some board posts, outage history) are made up and labelled so in the app.

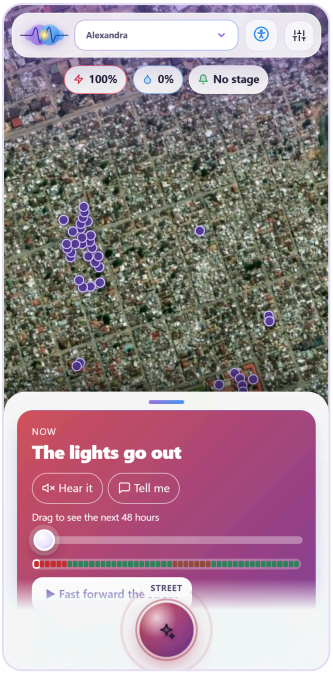

2. What is real, and what is sample

Real: the loadshedding status, official tariffs, map and building data (OpenStreetMap), weather, and all the app logic, which is covered by 112 automated tests. Sample and labelled: outage history for the demo, carers, equipment prices, payments, and some board posts.

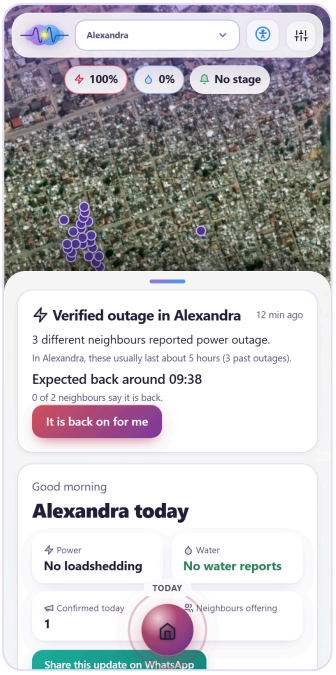

3. 90-second demo script

Time	On screen	Say
0:00-0:10	Title slide, then the app on the satellite street	"Loadshedding is over. But in kasi the power and water still go off, and nobody knows what is real. This is Kasi Grid."
0:10-0:25	The street goes dark; open Today for the verified outage and the map	"Three different neighbours reported no power, so it is a verified outage, not a rumour. It shows on the map, and the app says it is usually back around 09:30, because it has learned how long cuts last here."
0:25-0:40	Drag the 48-hour slider; show the forecast card	"It learns the pattern too. Power cuts here are most likely Thursday evening. It shows its confidence and says when it does not have enough data."
0:40-1:00	Deliver tab: the battery plan, then the live countdown	"Gogo uses an oxygen concentrator. Her family enters the device and battery and the app counts down the real hours, using the battery display for accuracy." (Mulanga)
1:00-1:15	The alert banner: Call ambulance; show the emergency card	"When time runs low it alerts, and the ambulance is one tap away. If you cannot speak on the phone, the card texts your location to a contact." (Mulanga)

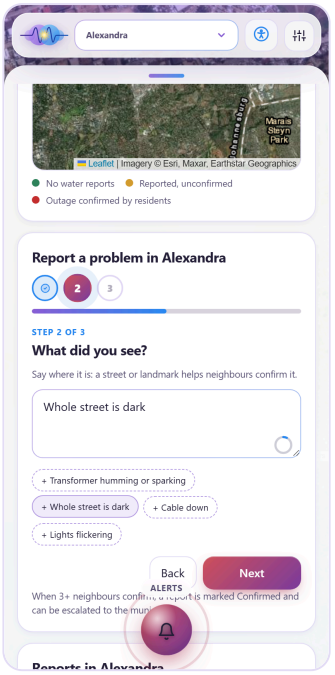

Time	On screen	Say
1:15-1:25	Business tab: outage costing you now	"For a spaza owner, what this outage has cost so far, and what would stop it."
1:25-1:30	Community board with an offer from a neighbour, then the accessibility button	"A neighbour offers a charger, a spaza orders with others, and it works for people who are deaf or blind, in four languages, offline. Kasi Grid brings a community closer together."
